IMPORTANT SAFETY INSTRUCTIONS

Please read this manual carefully and follow its instructions. Improper use or failure to follow these instructions could result in serious injury, death or property damage. Operators should be instructed in the safe and proper use and maintenance of this product. Keep this manual for future reference.

The following safety precautions call attention to potentially dangerous conditions.

![DANGER: Immediate hazards which WILL result in severe personal injury or death.](image)

![WARNING: Hazards or unsafe practices which COULD result in severe personal injury or death.](image)

![CAUTION: Hazards or unsafe practices which MAY result in minor personal injury or product or property damage.](image)

INSTALLATION

**WARNING:** Lock out all electrical power before opening any enclosures. Fuse protection should be provided. Hazards or unsafe practices COULD result in severe personal injury or death.

Mount the slip ring by sliding the mounting hub over the mounting shaft, snug against the drum plate of the reel, and securing it tightly with set screws. The mounting hub has a 1½” diameter bore and 2⅛” depth. The drive stud (customer supplied or mounted on the reel), must protrude through the hole on the drive plate allowing a 5/8” minimum clearance to the first brush-holder in line, in order to avoid electrical contact. Drive stud should not exceed ½” diameter.

**CAUTION:** Always check continuity before connecting power. Always provide slip ring with fuse protection. Hazards or unsafe practices MAY result in minor personal injury or product or property damage.

WIRING

To complete wiring, connect one set of wires to the stud on top of each brush assembly, and the other corresponding set of wires through the main shaft to ring leads. To hook up ring closest to hub, pull wire from shaft completely through slip ring assembly, and slide wire back inside ring assembly. Then slide wire through connector under the slip ring, and tighten the connector screw by reaching through the hole provided in the ring with a hex key. Connect remaining wire straight to connector from shaft and tighten.
MOUNTING

Slip ring hub must be snug to the drum plate. Drive stud must be protrude in drive hole on bearing flange of slip ring. Cut down shaft to dimension shown.

SERVICE

CAUTION: During disassembly and assembly, always be careful to install parts in their proper places. Hazards or unsafe practices MAY result in minor personal injury or product or property damage.

All parts illustrated (Replacement Parts Illustration) are available as repair parts should they require replacement. Install parts in their proper places. The brush–holder assembly should always be centered on the rings. Be sure that the brush surface makes complete contact with ring. Tighten set screws on collar to lock brushholder securely in place.

MAINTENANCE

The air gap slip ring requires no lubrication, or maintenance other than periodic inspection.

NOTE: Never treat ring surface with any type of lubricant or cleaner.
